INTRODUCTION

The fundamental issue of the nature and existences is established based on the life and death. Only the glorious and majesty nature of the God will be survive without any changes in the universe. The stars and celestial bodies are one of the most interesting phenomenons in the system of the nature having both life and death in this case [22]. The Holy Quranic verse state about these wonderful issues that the natural sciences are superior to the hypotheses and the science of the astrology is considered as one of these fundamental and basic sciences. The main purpose of the present study is to investigate the hypothesis comparative method and discoveries of the astrology along with the Quranic verses; also it tries to find the most matching verses with the astrology science. First, the most important verses regarding to the representation topics and then the scientific truths will be investigated together in this pavement.

Representation of the topic:

How much are these scientific problems important? How much these Quranic verses can represent the truths of the science?
Sky in the resurrection day:
The sky will lose its coherence in the resurrection day (Al Hagheh: 16). The unification of the sky will be destroyed and the other universe will also get destructed; its color will be turned into the red color like a rose flower and then it will be melted streaming into the sky:

A day the sky will be melted like an oil (Al meraj: 8). And it will be like a mouth and this is the same thing being out of the rose flower after melting; and when the sky is broken down, it would be like a flower (Al Rahman: 37). The main purpose of the sky’s similarity to the flower is that it is consisted of some different sections or pieces. And at that time the seven skies will be halved being transformed like strings; a day when the mass smokes are streaming over the sky and there will not any help there (Al Rahman: 35). By the way, the atmosphere as one of sky storey, is the same thing protecting us from the attack of sky stones and igniting gases will be halved and the earth will become or susceptible to the various dangers and other gases will be penetrate into the earth; as the Holy God says:

A day when changes into another earth and the skies will transform into other skies and people must get raedy in front of the Lord (Ebrahim: 48) [21]. The complexity of the scroll happens when the sun gets destructed (Takvir: 1). The sun is a very hot land where its material are completely compressed but in the end of the world and about to the resurrection day, it will be completely devastated being cold and its volume will be completely reduced [15].

The aim of sun’s destruction:
It is subjected to its off time [19]. It is stated that the sun will be turned off from its core and it will transform into the central layer as a labyrinth and it is showing its contraction formation at that time [10]. The sun produces about 564 million ton hydrogen per every second as its own consumption that about 560 million ton of this produces Helium and the left 4 million ton as 0.7% is the consumptive case and the same left degree is changed to the energy publishing as the light and heat [16]. Our sun is about 5 milliardi years old and about 4.5 milliard years later it will be ended up by consumption its hydrogen; in this case the Helium begins to melt producing carbon and oxygen and the temperature of the sun reaches to 100 million degrees. The prediction of the climate will be very hot and misty conditions; this will evaporate the whole oceans at that time and the sun starts expanding like a gigantic monster getting larger in the sky. After short period of time the very intense solar winds will blow forming external layers as a cloudy shape; the external layer of the sun will surround the Venus, earth and Mercury and it will even swallow the Mars. Then the sun will be turned into a small white body and after long terms this also will change into a black dead body [6].

Destruction of the gravity balance in the resurrection day:
The Holy God is the same one that has created the whole existences and universes as well as the skies without even a column (Raad: 2). We created the skies without a column (Loghman: 10). He keeps the sky unless His Majesty allowance (Haj: 65). The planets of the skies have been suspended stably without having any column and only the gravity force has kept them into their own location; based on the Newton findings there is a relationship between the mass of these planets and the distance plays a key role in this case. When the mass of a body is getting higher, its gravity will be increased, too. For example, the mass of the sun is 330 thousand times than the mass of the earth and hence the gravity force of the sun will be 330 thousand times higher than the earth and the square proportion of this distance reduces the gravity; for example, if the related distance becomes two times, the gravity force will be four times [4]. There is a Hadith from Imam Ali in this case: the world is getting expanded and the constellations are also getting away each other rapidly. But does the world get expanded forever? Or the expansion will be stopped in a day? Or will the universe back to its own start point? Due to the recent system of the universe, the whole stars will be distributed and destructed everywhere in the sky and there will not be left something at that time according to the Holy Quran [9]. The scientists have stated in relation to reply these questions that:

There will be a day when the sun and moon will be together (Ghiamat: 9) and the moon will be getting dark (Ghiamat: 8); the closeness of the sun and moon together may come from the fact that the gravity and absorb force will be destructed at that time and the moon will be absorbed to the center of the sun. in the other hand, the wave lines and taken pictures of the constellation status show that the constellations are about to clash each other; these kinds of clashes happen intensely so that two constellations may be halved into two sections and sometimes they get close each other; it is believed that these two constellations will be clashed harshly each other due to the gravity force around them making the regularity of the stars together making them to get out of their own center bringing a kind of irregularly in this case [5]. Gathering up the sun and moon: there will be a day when the sun and the moon gather up together (Ghiamat: 9). What is the main aim of gathering the sun and moon up? The scientists have mentioned various ideas in this regard; some of them have stated that they will both get together and along together; and or both will be arisen from the east and getting down in West [7]. And sometimes it is stated that both sun and moon will lose their lights getting together [14]. This is possible that the moon will be gradually absorbed by the gravity force of the sun; anyway, here we want to point to two
phenomenon of the resurrection day; in other words, the moon will be lightless and the sun will be also gathered up; as we know the light of the moon is coming from the sun; when the sun gets dark, the moon is also getting dark and as a consequence the earth gets into a dreadful darkness; for the reason, the universe will be ended up by a gigantic revolutionary phase and the resurrection of the human being starts [18].

The distribution of the stars in the resurrection day:

And when the sky halves into some sections (Al Enfetar: 1). And when the stars separated to everywhere (Al Enfetar: 2). And that day the stars fall down (Takvir: 2). The main aim of the Enfetrat is subjected to the separation and distribution; Entasarat means the distribution and Entesar is subjected to distribution and the whole stars will be distributed everywhere like a necklace [10]. Finally, the stars will be collapsed and tumbled down in sky destructing the system of the universe; gigantic explosions will happen at that time around the celestial bodies and the constellations will lose their unifications and the stars will be get out of their own orbits harshly and the age of the universe will be ended up by this way; everything will be ended up and new world will be constructed over its ruins in the resurrection day [11].

Phases of stars death:
1- Red monster phase: when the entire hydrogen of the star transformed into the Helium, the same star will be rapidly changed because the energy coming from its melted center does not produce again; its gravity load will contract the star in this phase; due to the rapid contraction, the temperature will be increased around the center and surrounding of the star harshly; along with the increase of the temperature, the hydrogen of the crust begins igniting around it; the obtained energy of this melting time is higher than the produced point in the center. This surplus energy pushes the star external layers out and as a consequence it gets bigger in this pavement [3].
2- The side monster phase: when the Helium is ended up into the core of a star, the core begins contracting and getting hot and hot.
3- Three alpha phase: in this case, the crust around the core starts forming the melting of hydrogen in the next layers. By increasing the rhyme of the energy production around the crusts, the external layers of the star get expanded. The star gets changed into a monster again but this time it is getting blue and shining around [1].
4- Small white body phase: during thousands years, the side monster gets evaporated. The left core is called white body [23].
5- Black body phase: since the white bodies do not have enough combustion to be melted, they will be cold and cold over billion years and finally they will be turned into a black body with oblique mass in this case [17].
6- Notronic stars: after a big explosion happened and made a new star of type II, the left piece of the star core is transformed into a Notronic star if the left mass is lower than three times of the sun mass. The early temperature of these Notronic stars is 10 Million kg [20].
7- Black holes: if the left core of a new star has a mass three times higher than the sun mass, there will no force established against its gravity. The core will be compressed making a black hole. No any area in the space can get out of its gravity force. The black holes are invisible because the light is also get captured by it (Jacklin and Simon Miton, translator: To figh[11].

Discussion and conclusion:

By the investigation of the celestial bodies in the sky along with the Quranic and Rivayats and scientific approach, it can be concluded that the religion is not opposed of the scientific issues; in addition the knowledge of the mankind can make extra reasons for the certainty of this valuable book of Quran. Thus, there is a relationship between the celestial bodies and Quranic truths interestingly. In the Holy Quran these celestial bodies have been frequently mentioned. By the progression of the science, the glorious sophistication of the Holy Quran is getting apparent for the humanity in the world. Also the higher discoveries can help to understand and digest the meaning of the Holy Quran verses potentially.
